

## Black Water Beetle

**Length:** 10-15 mm

**Active period of Adults:** Spring & Summer

**Habitat:** Suburban, country gardens

**Status:** common in NE Victoria

**Distribution:** not sure

**Additional notes:** The Black water is an interesting species. At night the adults often fly & hit brick walls, windows, etc thinking they have found a pond of water, when they get to close, the beetle hits the wall & lands upside down. Often found under bright lights.
